

BURN WOUND

18-year old female patient with a burn wound (grade IIa) on her knee

PREVIOUS TREATMENT

Start treatment with ④ 24 hours after the accident. Initially, the wound could not be cooled due to a lack of cooling options.

TREATMENT WITH ④

Wound cleansing with saline solution and application of ④. Coverage with a non-woven gauze and fixation with an elastic bandage (alternative: tube gauze).

RESULT

Wound closure within 13 days.

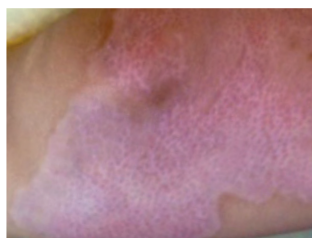

Day 1

Day 3

Day 9

Day 13

CONCLUSION HEALTH CARE PROFESSIONAL

Dr. M. Palombi, MD, Italy

“In a burn situation like this one (epidermis and part of dermis burned) the nerve endings are exposed, which causes pain. When applying ④ the nerve endings are coated with an oil film which leads to a fast and significant pain reduction. Since ④ supports healthy skin function, the elasticity of the newly formed skin is greater, which supports the mobility of the affected body part.”
